

---

SIA Karne Filtrs has participated in an intensive academic summer courses program organized by BEST (Board of European Students of Technology).

The purpose of the events organized by BEST is to strengthen the connections between technical universities throughout Europe and to stimulate the implementation of joint projects between educational institutions and various businesses. The number of BEST members at present time includes 94 higher educational institutions from 32 countries.

In the year 2013 the subject of academic courses was the Drinking water and its quality. Students from 22 countries have visited the Karne Filtrs company as part of the academic course. The visit included a lecture about the water treatment technologies, particularly such technologies as nanofiltration and reverse osmosis, getting acquainted with the process of membrane systems assembly as well as the work of the containerized membrane pilot plant. Apart from that students, accompanied by SIA Karne Filtrs chief engineer, had the opportunity to visit one of the Karne Filtrs projects - the municipal water treatment plant in Kauguri, Jurmala .

Karne Filtrs Company is honored to contribute to the formation of the new generation of technical specialists.
