

On the 15th of October 2013, as part of the Uzbek-Latvian business forum, SA "Karme Fibra" the member of the Clean Technologies Cluster (CleanTech Latvia), represented by the General Director Andrijs Belogribovs, has signed the Intention Protocol with the Public Utility Service Agency of the Republic of Uzbekistan "Uzbekmuhohmat".

On the first stage of cooperation Uzbek Agency "Uzbekmuhohmat" and the company SA "Karme Fibra" (Latvia, Riga) assume to identify the priority projects for water supply systems modernization in the Republic of Uzbekistan as well as jointly organize inspections of the defined facilities in order to form pilot projects.

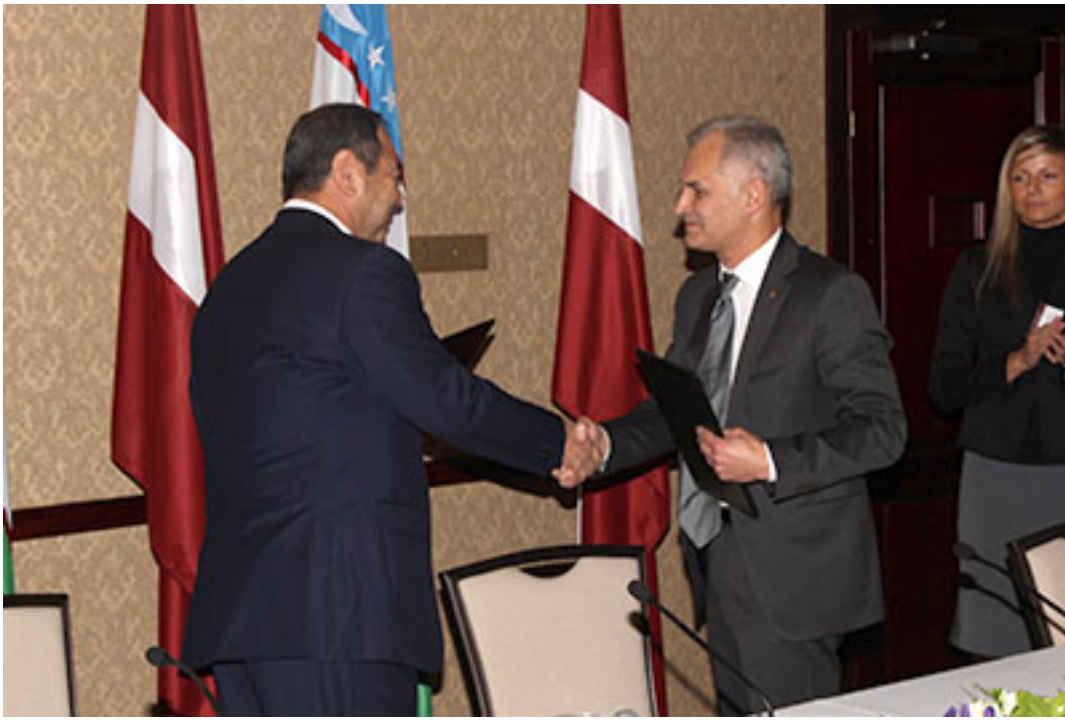

The water treatment technology testing for the chosen facilities will be carried out by means of the "Karme Fibra" mobile containerized pilot station, taking into account the preliminary survey results.

Apparently, firstly the focus will be on the facilities of Karakalpakstan, where water sources are the most polluted. This area is also closely located to the Aral Sea that is the spot of an environmental disaster.

One of the effective ways to solve the small town water supply problems is to install a mobile containerized water treatment plants. "Karme Fibra" has the necessary experience in this type of solutions. "Karme Fibra" containerized station has been successfully operating for already several years in Kokka (Latvia). Technology development and production of the plants will be provided by qualified and experienced professionals of the Latvian party, while the operation and maintenance will be the joint concern of the parties. In order to achieve these objectives a joint venture on an equal footing will be set in the Republic of Uzbekistan.

Given the scale and seriousness of the objectives of the program of modernization and development of water supply systems in the Republic of Uzbekistan, including providing the population with quality drinking water, the partners are hoping for a long and successful partnership.
